a Example sharp peak (I→I)
STG 0.012
jitter-expected, pointwise Poisson 99.9%
observed
1-4 ms
Spike pairs per 1-ms bin
Lag of post spike (ms)
b Without location (main)
median +0.43 vs +0.21
pairs: p = 0.010
presyn. units (n = 42): p = 0.076
matched unconnected
sharp-peak pairs (n = 112)
Fraction of pairs
Selectivity-profile similarity (r)
c Inhibitory pairs: too few to test
grey: matched-null 95% of median
sharp peaks n = 112
troughs n = 5 (I→I)
resolver: units with dissimilar selectivity inhibit each other
Similarity without location (r)
d With location (secondary)
median +0.84 vs +0.56
pairs: p < 0.001
presyn. units (n = 42): p < 0.001
Fraction of pairs
Selectivity-profile similarity (r)
