Units with RF at the expected location; target appears at a 90° neighbour
a classic (E), n=50
b interneuron (I), n=90
c suppression by target angle
expected location = RF
expected location = opposite
rate re pre-target baseline (sp/s)
200-250 ms: -0.0 sp/s (p=0.91)
200-250 ms: -2.3 sp/s (p=0.0046)
0-50 ms: +0.16 (p=0.59)
0-50 ms: +1.17 (p=0.0048)
RF − opposite (sp/s, 95% CI)
time from target onset (ms)
(target at a 90° neighbour)
classic (E) (n=72)
interneuron (I) (n=154)
180° vs 90° ipsi (McNemar):
E p=0.039, I p=0.0015
units with pre-saccadic suppression (%)
90° contra
90° ipsi
180° opposite
target angle from RF centre
